

# Nettun@7000<sup>int'l</sup> 4Restaurant

## THE IDEAL PARTNER FOR YOUR RESTAURANT

As restaurant owners know, the work behind the scenes has to be impeccable and silent.

**Nettun@7000<sup>int'l</sup> 4Restaurant** is the ideal solution: an integrated system for immediate, precise connection between the dining room, the kitchen and the cash desk, to optimise every activity.

OLIVETTI RETAIL SOLUTIONS

An extremely flexible solution, **Nettun@7000int'l 4Restaurant** can be configured to the needs of the individual restaurant and easily updated to support subsequent changes. The heart of the system is the powerful and reliable Nettun@7000int'l software, linked to a wireless router for automated management of customer orders via tablets and printers installed at the production point. For more complex architectural layouts, the system uses simple PowerLAN adapters to transform the restaurant's power network into an efficient data transfer channel.

### IN THE DINING ROOM, SPEED AND FLEXIBILITY WITH CUSTOMERS

- up to 5 tablets on a wireless connection for order taking
- touchscreen graphical layout with simple intuitive functions
- interactive map showing table status: free, booked, occupied, closing
- functions to free, combine, move or book tables
- multi-phase customer order management for transmission to printers
- management of variation requests for each dish
- pre-bill management
- order cancellation, reversal, summary functions

### IN THE KITCHEN, A CONCRETE TOOL TO OPTIMISE WORK

- up to 5 printers run by the cash register application
- selective order printing at production points (bar, kitchens, oven, grill...)
- inclusion of all useful information on the order: waiter name, table number, number of diners, time and date, preparation sequence, number of courses ordered, variations

### AT THE CASH DESK, MAXIMUM EFFICIENCY AND COST-EFFECTIVE MANAGEMENT

- intuitive programmable interface
- personalised configuration for bars, pubs, pizzerias, restaurants
- management of up to 100 tables
- task management for dining room staff
- closure of customer bill with itemisation
- issue of deferred or immediate invoices, simplified invoice management
- storeroom management with minimum stock level setting and management reports for understocked items
- integrated management of meal vouchers
- allocation of different price lists to the same item

Performance refers to system use in optimal conditions. With the right to vary technical characteristics.
